

Peer-Review Process Statement

Asian Journal of Medical Technology is dedicated to ensuring the highest standards of peer review while providing timely and constructive feedback to our authors. We utilize a **single-blind review** process, where the reviewers know the identity of the authors, but the authors do not know the identity of the reviewers. The manuscript submission and peer review process are broken down into the following steps:

1. Manuscript Submission

- Authors submit their manuscripts through our online submission system.
- The submission is initially checked for compliance with our formatting guidelines and scope by the editorial office.
- Manuscripts that do not meet these criteria may be rejected at this stage without external review.

2. Reviewer Selection

- The editorial office selects two or more expert reviewers in the relevant field to evaluate the manuscript.
- Reviewers are chosen based on their expertise, research interests, and previous performance as reviewers.
- Selected reviewers are invited to review the manuscript.

3. Review Process

- Reviewers evaluate the manuscript based on its originality, methodology, significance, and clarity.
- Reviewers must declare any potential conflicts of interest and confirm their availability to complete the review within the stipulated time frame.
- Reviewers provide detailed, constructive feedback and recommend one of the following actions: acceptance, minor revision, major revision, or rejection.

4. Decision Communication

- The editorial office collects the reviews and compiles the feedback.
- The editorial office assesses the reviewers' comments and makes a decision based on their recommendations.
- The editorial decision, along with the reviewers' comments, is communicated to the authors.

For any questions regarding the peer-review process, please contact the editorial office at:
